GET THAT SCOTCH BOILER FAST...And With Confidence **EASCO ACHIEVES U/L LISTING FOR FIELD-ERECT BOILERS**

Bronx, NY (November 20, 2001) -- The world's fastest and most convenient way to get a firetube boiler for replacement or new construction - is now UL labeled and listed as well. EASCO Boiler Corp. has received authorization to apply the UL Mark to its Series FST, ESP and SM4 field-erected firetube boilers.

In a letter to company CEO Leon Eastmond, T.K. Thompson of Underwriters Laboratories Inc. informed him of the completion of their investigation and the authorization to apply the UL Mark to the company's Series FST, ESP and SM4 field-erected 3-pass scotch marine boilers from 20 BHP to 1000 BHP.

Field-erected boilers have long been accepted as the preferred - and sometimes only way - to install heating replacement boilers in difficult to reach mechanical rooms. In recent years, field-erection has become a preferred choice for new construction projects where quick delivery and installation was a primary factor (with this method a 100 BHP scotch firetube can often be built in place in less than one week). Now, with the UL's investigation, testing and authorization, these field-erected boilers can carry the same approvals as factory-built packaged boilers - without the additional costs of UL field approvals formerly required. The UL listing is available on any EASCO FST, ESP or SM4 models which are adaptable to any fuel/gas/oil burner.

EASCO Boiler Corporation is division of Eastmond Corporation - located in the Bronx, NY - manufacturers of quality packaged firetube boilers, providers of mobile boiler rooms and complete boiler room systems.
